

Guidance note

Seed potato – Eos variety

Origin	South Africa		
Description of tubers	<p>Oval with very shallow eyes. Tubers are predominantly medium to large with very little small to baby size.</p> <p>Skin is very smooth with a cream to white finish. Flesh is white to light cream with a fairly firm texture.</p>		
Cropping details	<p>Medium grower and grows about 90-110 days after emergence till natural foliage die off. Tall and strong growth but initial development somewhat slow. Plants are very hardy and give a good cover. It has few white flowers.</p> <p>Plants initiate a lot of tubers under the right conditions. This variety bulks early and has very uniform tubers, with a low percentage of small tubers.</p>		
Yield	Eos has very high yield potential.		
Resistance characteristics	Scab	Late blight	Early blight
	Good resistance	Moderate resistance	Moderate resistance
Cooking quality	Fairly firm texture.		
Keeping quality	Tubers could be stored for a long time.		
Any other notes	Plants are slightly susceptible to drought.
